

Driver Safety with Vision 2.0 Dash Camera

Raise the bar on driver safety with our in-cabin & road-facing dash cam solution

Getting a complete video dash cam solution for your fleet drivers is not only an easier way to get better insurance rates, but also for your mobile staff to feel supported and more confident on the road.

Inclement weather, bad traffic, poor road conditions, and other road users can create a hazardous environment, where a driver's focus is split many ways.

By setting up Vision 2.0, you get a complete dash cam solution with alerts and video recording that will provide your drivers with an added layer of road safety, risk detection, and protection against fraudulent claims.

Key benefits

Lower your insurance premiums

Insurance providers are more likely to give you lower rates when you have a driver safety solution in place as a preventative measure. So having a dual-facing dash camera that will alert your fleet driver to potential problems is a great start.

Save on litigation costs & pay outs

Did you know that having a video recording of what happened could fast track an insurance claim? In an incident where both drivers claim no fault, providing unbiased video footage from your dash cam to the insurance company will help resolve that.

Improve driver retention

By improving safety for your employees, you're also helping them reduce at-work stress levels. When your drivers know that they are supported and have in-cabin tools that will help them avoid undesirable events, they will have more confidence in their work.

Integrate with Fleet Complete Web platform

Have your Vision 2.0 footage, vehicle data, and driving analytics appear on the same interface online to have all information visible in one place. This is a great way to manage your fleet logistics and driver coaching without switching platforms.

Key features

We offer a wide range of features that will help you protect your drivers, reduce insurance costs, avoid liability issues, and increase employee retention by fostering a better safety culture.

Dual-facing camera to see what is happening in front of the vehicle and in the driver's cabin.

Mobile app for drivers to review their event videos, survey their own trips, and look at their driver scorecard.

Driver scorecard to make good drivers great by helping them improve their skillset.

On-the-edge AI processing for live event capture and identification as risky or dangerous.

Driver monitoring system (DMS) to help your drivers better manage fatigue while behind the wheel.

On-board LTE connectivity for hands-free, automatic start and end of a trip, as the ignition is turned on and off. No mobile phone required, as the camera connects by itself to LTE.

Advanced driver assistance system (ADAS) to help coach your drivers to reduce traffic violations like speeding, lane drifting, and tailgating.

Multi-driver support to keep performance metrics driver-specific when more than one user is driving the same vehicle in the same trip.

Easy plug-and-play installation to start reaping benefits without delay.
