

AT&T Fleet Complete integration with Jonas Equipment Scheduler

Streamlining service operations & improving dispatch

One system to track and manage your trucks and personnel, and one system to create and dispatch work tickets to technicians. Maybe you're using Jonas Software with another fleet management system. Or perhaps you're already managing your fleet with Fleet Complete and using Jonas Software Dispatch Scheduler but didn't know that you could integrate the two.

Either way, you're likely spending a lot of time on the phone with technicians, and continually switching back and forth between platforms. It's a clunky, manual process and you still don't have the visibility you need to track and manage work orders, trucks and personnel efficiently.

Automating and Optimizing Dispatching

Integrating Fleet Complete with Jonas Dispatch Scheduler rolls fleet management and service dispatching into one, easy-to-use application.

- Seamless integration with Jonas
- Significant improvement in client's dispatching efficiency
- Eliminates calling-in with drivers

How does it work?

Jonas Software holds details from all service orders that are being assigned and automatically uses the addresses to plot all job sites in Google Maps. Fleet Complete feeds the application with real-time GPS data on all technicians in the field to help you allocate the closest driver to the job. This way, you can make smarter, more informed choices and accomplish more work, faster.

Streamline your service operations.

With full visibility into the real-time location of each technician - from when they arrive at the job, to when they leave - you can send new jobs to the closest technician through GPS routing capabilities directly to their mobile device and eliminate calling-in. Accomplish more, faster. With a more efficient dispatching process, you'll be able to accomplish more work in less time.

Deliver a remarkable customer experience.

Delight your customers and gain an edge on your competitors by providing accurate technician arrival time, based on up-to-the-minute GPS data.
